Connecticut’s Opioid Drug Abuse Laws

By: Nicole Dube, Principal Analyst
September 1, 2017  |  2017-R-0152

Issue

This report describes Connecticut’s laws related to opioid drug abuse. It updates OLR Report 2016-R-0143. This report has been updated by OLR Report 2018-R-0129.

Summary

Like many other states, Connecticut is facing an increase in the number of emergency room visits and drug overdose deaths involving opioid analgesics (e.g., prescription painkillers such as oxycodone, hydrocodone, and fentanyl).

In recent years, the legislature responded to this trend by enacting laws to reduce and prevent opioid drug abuse, such as (1) increasing access to opioid antagonists (i.e., medication to treat a drug overdose); (2) providing immunity for people who (a) seek emergency medical assistance for themselves or another person experiencing a drug overdose or (b) prescribe and administer opioid antagonists to a person experiencing a drug overdose (“Good Samaritan” laws); (3) establishing a statewide prescription drug monitoring program; and (4) limiting the amount of certain opioid drugs that may be prescribed to adults and minors.

This report highlights provisions of Connecticut law intended to reduce or prevent opioid drug abuse. It does not include all of the laws’ provisions; to read the laws in their entirety, visit the Connecticut General Assembly’s website. Nor does the report include laws imposing criminal penalties for violating drug laws.

Access to Opioid Antagonists

Third-Party Prescriptions

Opioid antagonists, such as Narcan, rapidly reverse the symptoms of an opioid drug overdose. They are not addictive and do not cause a “high” or pose any serious health effects when taken by a person not suffering from a drug overdose. Historically, Connecticut prohibited the prescription of these medications to a person other than the drug user in need of intervention (i.e., third-party prescriptions). But in 2012, the legislature changed the law to allow licensed health care practitioners authorized to prescribe opioid antagonists to prescribe, dispense, or administer them to anyone (e.g., family members or other individuals) to treat or prevent a drug overdose (PA 12-159, codified at CGS § 17a-714a).

Prescriptive Authority for Pharmacists

Connecticut law allows physicians, dentists, podiatrists, optometrists, physician assistants (PAs), advanced practice registered nurses (APRNs), nurse-midwives, and veterinarians to prescribe opioid antagonists within the scope of their practice. Legislation passed in 2015 also allows pharmacists to prescribe these medications, if they do the following:

1. complete a training and certification program approved by the Department of Consumer Protection (DCP) commissioner,
2. act in good faith,
3. train the recipient of the opioid antagonist in how to administer it,
4. maintain a record of the dispensing and training under the law’s record keeping requirements, and
5. refrain from delegating or directing another person to prescribe the medication or provide the training to the recipient (PA 15-198, codified at CGS § 20-633c).

Standing Orders for Pharmacies

Legislation passed in 2017 allows a practitioner authorized to prescribe an opioid antagonist to issue a standing order (i.e., non-patient specific prescription) to a licensed pharmacist for an opioid antagonist that is:

1. administered nasally or by auto-injection;
2. approved by the federal Food and Drug Administration (FDA); and
3. dispensed by the pharmacist to a person at risk of an opioid drug overdose or family member, friend, or other person who may assist a person at risk of such an overdose.
When dispensing an opioid antagonist under a standing order, the pharmacist must train the person to administer it and keep a record of the dispensing and training under the law’s recordkeeping requirements. The pharmacist must also send a copy of the dispensing record to the prescribing practitioner who entered into a standing order agreement with the pharmacy.

Additionally, the pharmacy must provide DCP with a copy of each standing order it enters into with a prescribing practitioner (PA 17-131).

**Alcohol and Drug Policy Council**

**Expanded Responsibilities**

Connecticut’s Alcohol and Drug Policy Council (ADPC) is charged with (1) reviewing state policies on substance abuse treatment programs and criminal sanctions and programs and (2) developing and coordinating a statewide plan for these matters. The statewide plan must contain measurable goals, including reducing the number of opioid-induced deaths in the state.

Legislation passed in 2017 expands the council’s responsibilities to include (1) developing a one-page fact sheet on opioid drugs and (2) examining the feasibility of implementing certain opioid abuse public education initiatives (PA 17-131).

**Opioid Fact Sheet**

A new law requires the ADPC, by October 1, 2017, to develop a one-page fact sheet on opioid drugs that includes the (1) risks of opioid drug use, (2) symptoms of opioid use disorders, and (3) available services in Connecticut for those experiencing these symptoms or who are otherwise affected by an opioid use disorder.

The council must make the fact sheet available on the Department of Mental Health and Addiction (DMHAS) website for health care providers and pharmacists to use and encourage them to disseminate it to anyone the (1) provider treats for opioid use disorder symptoms, (2) provider issues a prescription for or administers an opioid drug or opioid antagonist, or (3) pharmacist dispenses an opioid drug or issues a prescription for or dispenses an opioid antagonist.
Feasibility Study on Opioid Abuse Public Education Initiatives

A new law requires the ADPC to examine the feasibility of (1) developing a marketing campaign and making monthly public service announcements on opioid drugs and (2) establishing an electronic information portal (i.e., internet website or application) on the availability of substance use disorder treatment beds in Connecticut facilities. The council must report the results of the study to the Public Health Committee by January 1, 2019.

Continuing Medical Education

Connecticut law requires physicians, APRNs, PAs, and dentists to take continuing education (CE) in pain management and prescribing controlled substances as follows:

1. for physicians, at least one contact hour (i.e., 50 minutes) of risk management training or education that includes pain management and prescribing controlled substances (a) during their first license renewal period in which CE is required and (b) at least once every six years after that (CGS § 20-10b);
2. for APRNs, at least one contact hour every two years of substance abuse training or education that includes pain management and prescribing controlled substances (CGS § 20-94d); and
3. for PAs and dentists, at least one contact hour every two years of training or education in pain management and prescribing controlled substances (CGS §§ 19a-88 and 20-126c).

By law, both physicians and APRNs generally must complete 50 hours of continuing education every two years, starting with their second license renewal. Dentists generally must complete 25 hours of continuing education every two years, starting with their second license renewal. PAs must have completed the mandatory CE requirements needed to maintain national certification in order to renew their licenses.

Good Samaritan Laws

Prescribing or Administering Opioid Antagonists

Connecticut law allows licensed health care practitioners authorized to prescribe an opioid antagonist to prescribe, dispense, or administer it to treat or prevent a drug overdose without being (1) civilly or criminally liable for the action or for its subsequent use or (2) deemed as violating their professional standard of care (CGS § 17a-714a). Legislation passed in 2016 extended this immunity to all licensed health care professionals (PA 16-43).
The law also allows anyone, if acting with reasonable care, to administer an opioid antagonist to a person he or she believes, in good faith, is experiencing an opioid-related drug overdose. It generally gives civil and criminal immunity to such a person regarding the administration of the opioid antagonist (CGS § 17a-714a).

**Seeking Emergency Medical Care for a Drug Overdose**

PA 11-210 provides civil and criminal immunity to individuals who seek or receive emergency medical care for themselves or another person they reasonably believe is experiencing a drug overdose (CGS § 21a-279).

**Health Insurance**

**Coverage for Substance Use Disorder**

Legislation passed in 2017 requires certain individual and group health insurance policies to cover medically necessary (1) medically monitored inpatient detoxification services and (2) medically managed intensive inpatient detoxification services for insureds or enrollees who have been diagnosed with a substance use disorder. (These terms are defined in the same way as in the most recent edition of the American Society of Addiction Medicine Treatment Criteria for Addictive, Substance-Related and Co-Occurring Conditions.)

The law applies to individual and group health insurance policies delivered, issued, renewed, amended, or continued in Connecticut that cover (1) basic hospital expenses; (2) basic medical-surgical expenses; (3) major medical expenses; or (4) hospital or medical services, including those provided under an HMO plan. Because of the federal Employee Retirement Income Security Act (ERISA), state insurance benefit mandates do not apply to self-insured benefit plans (PA 17-131).

**Prior Authorization for Opioid Antagonists**

The law prohibits certain health insurance policies from requiring prior authorization for coverage of opioid antagonists. Specifically, it applies to individual and group health insurance policies delivered, issued, renewed, amended, or continued in Connecticut that cover (1) basic hospital expenses; (2) basic medical-surgical expenses; (3) major medical expenses; (4) hospital or medical services, including those provided under an HMO plan; or (5) single ancillary services (e.g., prescription drugs). Because of the federal Employee Retirement Income Security Act, state insurance benefit mandates do not apply to self-insured benefit plans.
Limits on Opioid Drug Prescriptions

Maximum Supply

Connecticut law prohibits a practitioner authorized to prescribe an opioid drug from issuing a prescription for more than a seven-day supply to an adult for first-time outpatient use. Legislation passed in 2017 reduced, from a seven-day supply to a five-day supply, the maximum amount of an opioid drug that may be prescribed to a minor under age 18.

When prescribing an opioid drug to a minor, the law requires the practitioner to discuss with the minor along with their custodial parent, guardian, or legal custodian, if present, the risks associated with opioid drug use. Legislation passed in 2017 additionally requires prescribers to have such discussions with adult patients, including:

1. the associated risks of addiction and overdose;
2. the dangers of taking opioid drugs with alcohol, benzodiazepines, and other central nervous system depressants; and
3. the reason why the prescription is necessary (CGS § 20-140, as amended by PA 17-131).

Exceptions

The law allows the practitioner to prescribe a larger supply of an opioid drug to a minor or an adult for first-time outpatient use if, in his or her professional judgment, the drug is required to treat the person’s acute medical condition, chronic pain, cancer-associated pain, or for palliative care. The practitioner must document the patient’s condition in his or her medical record and indicate that an alternative to the opioid drug was not appropriate to treat the patient’s condition. The law does not apply to medications to treat opioid drug dependence or abuse, including opioid antagonists and agonists (CGS § 20-140).

Voluntary Non-Opioid Directive Form

Legislation passed in 2017 requires the Department of Public Health (DPH), in consultation with DCP and DMHAS, to establish a voluntary non-opioid directive form and publish it on the DPH website for public use. A patient may file the form with a prescribing practitioner, indicating that he or she asks not to be issued a prescription or medication order for an opioid drug.
The law generally grants civil and criminal immunity to:

1. prescribing practitioners acting with reasonable care for refusing to issue a prescription or medication order for an opioid pursuant to a voluntary non-opioid directive form;
2. anyone acting in good faith as a duly authorized guardian or health care proxy for revoking or overriding the form; and
3. emergency departments’ prescribing practitioners acting with reasonable care for issuing a prescription or administering an opioid drug to a person with a voluntary non-opioid directive form if they had no knowledge of the form or deemed that an opioid was medically necessary at that time [PA 17-131].

Local EMS Plans

By law, local EMS plans must require that at least one EMS provider who is likely to arrive first on the scene of a medical emergency carry an opioid antagonist and complete a DPH-approved training on how to administer it. Each municipality must amend its local EMS plan to include this requirement by October 1, 2017 ([CGS § 17a-714a](https://www.cga.ct.gov/2017/2017aan.pdf), as amended by [PA 17-131](https://www.cga.ct.gov/billstatus/1718/billdetails.cfm?BillNumber=131)).

Prescription Drug Monitoring Program (PDMP)

[PA 06-155](https://www.cga.ct.gov/2006/sb06155.htm) required DCP to establish an electronic PDMP to collect prescription information from pharmacies on schedules II through V controlled substances to prevent improper or illegal drug use or improper prescribing. The program subsequently expanded by requiring prescription information reporting by (1) out-of-state pharmacies that ship or deliver prescription drugs into Connecticut and (2) any other drug dispensing practitioner, such as physicians, dentists, veterinarians, podiatrists, and researchers ([PA 13-172](https://www.cga.ct.gov/2013/sb13172.htm)).

Generally, dispensers must report prescription information within one business day to DCP, such as the dispensing date, dispenser identification and prescription numbers, and patient identifying information. If the program is not operational, the pharmacy or dispenser must report by the next business day after regaining program access.

Certain substances and dispensers are exempt from the program’s reporting requirements, such as (1) controlled substances dispensed to hospital inpatients and (2) institutional pharmacies operated by licensed health care institutions when dispensing or administering opioid agonists to a patient to treat a substance use disorder.
By law, before prescribing more than a 72-hour supply of a controlled substance, the prescribing practitioner or his or her authorized agent must review the patient’s records in the PDMP. The practitioner or agent must also periodically review a patient’s records in the program when the practitioner prescribes controlled substances for continuous or prolonged treatment (CGS § 21a-254).

Recent legislation made various changes to the program, such as (1) expanding who can serve as a prescriber’s authorized agent, (2) modifying reporting deadlines, and (3) allowing the DCP commissioner to share certain program information with other state agencies for certain drug abuse studies (PA 16-43 and PA 17-131).

**Working Groups**

**Opioid Drug Prescriptions**
Legislation passed in 2016 required the Public Health Committee chairpersons, by October 1, 2016, to convene a working group to address the issuance of opioid drug prescriptions by prescribing practitioners. The group had to study whether it is a best practice for prescribing practitioners to limit prescriptions to minors to no more than a three-day supply to treat an acute medical condition. It also had to report the study results to the Public Health Committee by February 1, 2017 (PA 16-43).

**Safe Disposal of Opioid Drugs**
Legislation passed in 2017 requires the ADPC to convene a working group to advise the council on any legislative or policy changes to enable first responders or health care providers to safely dispose of a person’s opioid drugs on the person’s death. The council must report to the Public Health Committee on the working group’s recommendations by February 1, 2018 (PA 17-131).

**Substance Abuse Treatment Referral Programs**
Recent legislation also requires the ADPC to convene a working group to study municipal police departments’ substance abuse treatment referral programs. These programs refer people with an opioid use disorder or who are seeking recovery from drug addiction to treatment facilities. The study must identify any barriers these programs face as well as the feasibility of implementing such programs statewide. The council must report on the working group’s findings to the Public Health and Public Safety and Security committees by February 1, 2018 (PA 17-131).
Miscellaneous 2016-2017 Legislative Changes

PA 16-43 and PA 17-131 make various changes to help prevent and treat opioid drug abuse, including:

1. generally requiring prescriptions for controlled substances to be transmitted electronically to a pharmacy, which must have the technology to accept such prescriptions;
2. allowing certain registered nurses employed by home health care agencies, with a patient’s designated representative’s permission, to destroy or dispose of the patient’s controlled substances;
3. requiring DPH, by October 1, 2017, to state on its website how a prescribing practitioner may obtain certification to prescribe take-home medications to treat opioid use disorders (e.g., Suboxone);
4. requiring alcohol or drug treatment facilities to use admission criteria developed by the American Society of Addiction Medicine;
5. expanding the settings in which certain certified, unlicensed individuals may practice auricular acupuncture to treat alcohol and drug abuse (they must do so under a physician’s supervision);
6. specifying activities included in an alcohol and drug counselor’s scope of practice, such as (a) developing an opioid use consultation report for review by a person’s primary care provider and (b) conducting substance use disorder screenings to document a person’s use of pain medications, prescription drugs, illegal drugs, and alcohol; and
7. adding to the list of reasons the DCP commissioner may take disciplinary action against a controlled substance registrant (a) failing to implement administrative safeguards to protect electronic health information required by HIPAA and (b) breaching these safeguards by a prescribing practitioner’s authorized agent.

A complete summary of the legislation is available on OLR’s website.
