

Dear Energy and Technology Committee member,

I strongly support the three bills: SB10, HB5350, and HB5008 which will make Connecticut a national leader on climate change remediation. The three bills together address the major areas of greenhouse emissions: electricity generation, emissions from cars and trucks and emissions from our homes and offices. By passing these bills, the CT Legislature will assure that CT has both superior air quality and strong job growth while doing its part to reduce the world wide CO2 concentration that leads to the negative effects of climate change.

Ingrid Manning

Sincerely,

Mrs. Ingrid Manning
