

## Testimony in support of SB 10

I support the kind of significant actions embodied in SB 10 to reduce greenhouse gas emissions. With regard to the transportation sector our efforts to date have had little if any significant effect on emissions. As you can see from below, emissions are just humming along with no reduction.

We need to up our game. The fossil record of our planet shows five major extinctions where there has been a die off of 75% or more of the species on earth. We are likely headed for the 6<sup>th</sup> if we continue as is.

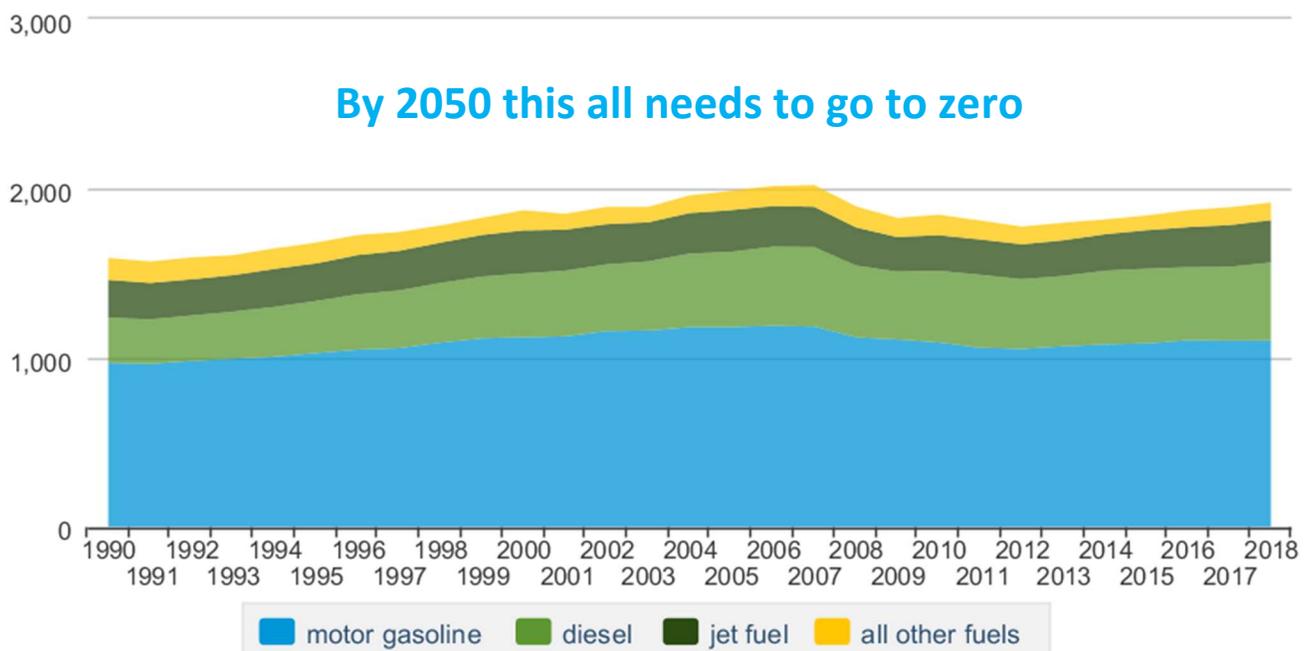

Please use your position in State government to protect the web of life on our planet.
