

I am writing in support of HB 6441: An Act Concerning Climate Change Adaptation. As a member The Stamford Garden Club and the Pollinator Pathway Stamford I am strongly involved in encouraging the defragmentation and improvement of habitat for pollinators of all kinds and clearly native urban plantings including trees and removal of invasives is critical. Tree planting is also important for the general health of urban residents- research clearly supports planting trees improves both the physical and mental health of city residents.
