

I firmly believe that voting should be done in person and that voting machines should be protected against any possibility of outside interference. They should be made secure through the elimination of USB connectivity and general online communication.

I know of several instances where ballots were mailed to people who were deceased and who no longer resided in Connecticut. It is everyone's right to go to a point place to vote.

please make sure that everyone's vote is legal. I do know of mail-in ballots that were mailed to individuals who were not registered voters.

everyone was gotten an incentive check from the government went to a bank or to a check cashing service to cash the check. They can just as easily go to voting location to vote. The integrity of the voting system and democracy is at stake.

Thank you,  
Thom and Eleanor Pesce
