

Please do not pass sb1024. It is unfair and unrepresentative. It will seriously damage and change our community as well as harm our environmental efforts to save the last of our precious natural resources. None of us will survive if we Continue to degrade our ecosystems and last homes for nature beside human settlement. This bill gives preference to human development well beyond the carrying capacity of the environment. We must learn to live together with nature and other species.

Thanks for your help in protecting our homes for all species in Connecticut.
